                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AUTHORS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sd
                  http://gnomic.stanford.edu/~chris/GENSCANW.html), and NetPlantGene (http://www.cbs.dtu.dk/netpgene/cbsnetpgene.html). searches of the complete sequence against a peptide database and the Arabidopsis EST database at TIGR (http://www.tigr.org/tdb/at/at.html). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://dx.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com/server/add/.database.com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (24-JAN-2001) The Institute for Genomic Research, Medical Center Dr., Rockville, MD 20850, USA On Jan 24, 2001 this sequence version replaced gi:12280869. On Sep 19, 2002 this sequence version replaced gi:21737800.

On Sep 19, 2002 this sequence combination of BAC based reads rhe sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Requence assembly (a 'contig-scaffold'). Within each contig-scaffold, assembly (a 'contig-scaffold'). Within each contig-scaffold, assembly (a 'contig-scaffold'). Within each contig-scaffold with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence may extend beyond the ends of the clone and there may be sequence sontigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (03-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:24819627.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 (bases 1 to 239343)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This sequence may represent more than one clone. NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)

The method may be used for genotyping an CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC disease, central nervous system disease and combinations of these. In CC addition, the technique may be used to predict an individual's response CC addition, the technique may be used to predict an individual's response CC norepinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. guinephrine, constitute, oxymetazoline, guanabenz, UK14304, BHT933 and CC crauwolscine, idazoxan, tolazoline, phentolamine and combinations of these) by detecting the polymorphic site and correlating the site to a CC predetermined response (where the response is correlated to adenylyl cyclase, MAP kinase activity, phosphorylation or inositol phosphate confering the present sequence is that of a human alpha-2BAR PCR primer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072)

```

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent: useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

      4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying GM4,6D inhibitors GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases affected by the ucosylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, repertusion injury, stroke or infection. The GM4,6D peptide or a polynucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polynucleotide is useful in developing an assay for defects in the enzyme, as well as in gene replacement therapy. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; GDP-mannose 4,6-dehydratase; GM4,6D; gene; ss; inflammation; cellular fucosylation; glycoconjugate fucosylation; transplant rejection; arthritis; asthma; sepsis; reperfusion injury; stroke; infection; complex carbohydrate; gene replacement therapy; immunosuppressive; antiinflammatory; antiarthritic; antibacterial; cerebroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising GDP-mannose 4,6-dehydratase (GM4,6D) peptide, for manufacturing complex carbohydrates, or as targets for screening GM4,6D antagonists for treating e.g. arthritis, or transp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form specification, but was obtained in electronic f
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                 The invention relates to a composition comprising a human GDP-mannose 4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases affected by the fucosylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GM4,6D peptide or a polymucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polymucleotide is useful in developing an assay for defects in the anzyme, as well as in gene replacement therapy. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;

Sequences AAS29931-AAS30164 represent genomic DNA molecules, which encode CC the lung antigen polypeptides of the invention. Lung antigen polypeptides CC and their associated polynucleotides are useful in the diagnosis, CC treatment and prevention of various types of disorders in e.g. humans, CC mice, rabbits, goats, horses, care gogs, chickens or sheep. A CC pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable CC disorders include autoimmune diseases such as rheumatoid arthritis, CC chyperproliferative disorders such as neoplasms of the breast or liver, CC cardiovascular disorders such as cardiac arrest, cerebrovascular coular disorders such as cardiac arrest, cerebrovascular coular disorders such as cardiac arrest, viruses and fungi, CC orban's disease, infections caused by bacteria, viruses and fungi, CC premature labour and infertility, gastrointestinal disorders such as CC crohn's disease, renal disorders such as glomerulonephritis and CC respitatory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, CC to maintain organs before transplantation, to regenerate tissues and in CC chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

CC CC at figuration, but was obtained in electronic format directly from WIPO CC at figuration int/pub/published_pct_sequences.

                                                                                                                                                       The invention relates to human tweety homologue 2 (TTYH2) polypeptide and polynucleotide sequence. TTYH2 is useful for producing an antigen-binding molecule that is immuno-interactive with the polypeptide. The agent is useful for manufacturing a medicament for restoring a normal level and/or functional activity of TTYH2 expression in a patient, and for treating or preventing cancer or tumour. TTYH2 sequences may also be used to provide both drug targets and regulators to promote or inhibit one or more activities, and to provide diagnostic markers for cancers. The present sequence is human TTYH2 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 68;

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by

of the plasmid pNGR234a isolated from

Rhizoblum sp. NGR234. Open reading frames (ORF) derivable from the nucleotide sequences or ORFs can be used e.g. in the transportation of compounds to and from an organism which is a host to at least one of the nucleotide sequences, ORFs or proteins, the degradation and/or metabolism of organic, inorganic, natural or xenobiotic substances in a host organism or the modification of the host range, nitrogen fixation abilities; for obtaining a synthetic minimal set of ORFs required for functional Rhizoblum-legume symbiosis,

                                                                                                                                                                                                                                                           New nucleic acid that hybridizes to Arabidopsis thaliana sequences, useful e.g. for preparing transgenic plants with increased resistano or altered metabolism
                                                                                                                                                                                                                                                                                                                                                                                                                  (DAVI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RAME/
                                                                                                                           The invention relates to nucleic acids (I) that hybridise under stringent conditions to any of 999 sequences (ABQ65424-ABQ66422) or their fragments. (I) are used to express the corresponding polypeptides (II) or produce genetically modified plant cells or transgenic plants, which to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered may have improved resistance to disease or stress, or altered, nutritional or medicinal products), or generally any trait of interest, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agents (e.g. fungicides, or insecticides and antibiotics).
                                                                                                                                                                                                                                                                                                                            Hurban P;
                                                                                                                                                                                                                                                                                                                                        Garcia CA,

The invention relates to novel purified or isolated nucleic acids of cessential genes of Aspergillus fundgatus. The isolated nucleic acids of the invention are used to treat or prevent infectious by a pathogenic companism such as A. fundgatus, to treat a non-infectious disease in a companism such as A. fundgatus, to treat a non-infectious disease in a pathogenic companism such as A. fundgatus. The polynucleotides are useful for companism funding the pathogenic companism of an object companism invade or reside, for companing with the pathogenic expressing recombinant protein for characterisation, screening or companisms invade or reside, for companing with the pathogenic companisms to identify duplicated genes or paralogues having the same or companism to identify duplicated genes or paralogues having the same or companism to identify and/or function, for companisms to identify similar biochemical activity and/or function, for companism to identify sequences of other related or distant pathogenic organisms to identify and sequences of other related or distant pathogenic organisms to identify and corporate or to interest to a pathogenic organism to identify and response, for salecting and corporate or to interest or to identify into the pathogenic organism to the protein antibodies, as an organism or companism to the pathogenic organism in another immune response, and for identifying polynuclectides encoding the other protein corporate in munice and for identifying polynuclectides encoding the other protein corporate in munice polynephides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively isolate correlative receptors or ligands in the case or virulence corporate in which pathogenic organism invade or reside, and to companism invade or reside, and to companism to interest or interest or interest or organism invade or reside, and to companism to the interest or interest 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-APR-2001; 2001US-285697P.

             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score
